

B. Three estimates of the proportion ever evicted by age 15

Absolute lower bound

Estimate 1: 7.9 % (CI: 7.1–8.9 %)

Dot-dash indicates that some cases are missing in each window
Missing cases are assumed to be not evicted

Impute survey non-response

Multiple imputation

Estimate 2: 9.2 % (CI: 7.3–11.1 %)

Long-term recall: May understate prevalence

Infer prevalence over years when no survey was conducted

Multilevel logistic regression

Model fit on five annual reports

15-year prevalence inferred from model parameters

Estimate 3: Overall 15-year prevalence = 14.8 % (CI: 12.6–17.2 %)

0 1 2 3 4 5 8 9 14 15
